PROFESSIONAL SUMMARY

Computer Science and Engineering graduate with hands-on project experience in web development, Python programming, machine learning, data analytics, and application deployment. Familiar with Java, Python, JavaScript, React.js, Flask, Node.js, SQL, TensorFlow, and Git-based development workflows. Developed projects spanning real estate, data cleaning, infrastructure automation, AI-assisted healthcare, and business analytics. Seeking entry-level opportunities in software engineering, Java development, Python development, frontend development, or AI/ML engineering.

TECHNICAL SKILLS

Programming Languages: Java, Python, JavaScript, SQL,C
Frontend Development: HTML5, CSS3, React.js, Responsive Web Design
Backend Development: Flask, Node.js, Express.js, REST APIs
Databases: SQL, MongoDB, Supabase (project exposure)
AI and Machine Learning: TensorFlow, Keras, CNNs, Image Classification, Data Preprocessing
Tools and Platforms: Git, GitHub, Vercel, Docker (fundamentals), Excel, Power Query, IBM SPSS

INTERNSHIP EXPERIENCE

Software Engineering Intern **Sep 2025 – May 2026**
Main Flow Services and Technologies

- Gained exposure to software development workflows, technical problem-solving, and programming tasks.
- Add verified responsibilities, technologies, and deliverables from the internship before submitting this resume.

SELECTED TECHNICAL PROJECTS

SV Real Estate Hyderabad Live Website

- Developed a real estate web application to present property information and collect customer enquiries.
- Worked on enquiry forms and administrator workflows to support enquiry management.
- Technologies: Web development, JavaScript, and the configured backend and database.

FSindhu App – Personalized Web Application Live Website

- Created and deployed a personalized web application as a birthday gift, demonstrating frontend development, interface design, and web deployment.
- Deployed the application using Vercel.

CleanSweep – Data Cleaning Application GitHub

- Developed a project focused on streamlining data-cleaning workflows and preparing datasets for analysis.
- Document supported file formats, validation rules, and tested functionality based on the actual implementation.

AEGIS – Self-Healing Infrastructure GitHub

- Explores infrastructure monitoring, fault detection, automated recovery, and DevOps workflows.
- Relevant to infrastructure automation and reliability engineering.

JARVIS Swarm – Multi-Agent Project GitHub

- Explores agent-based architecture and coordination for AI-oriented workflows.
- Add the actual frameworks, orchestration approach, and verified capabilities implemented in the repository.

Machine Learning-Based Lung Cancer Classification

- Academic project exploring CNN-based classification of histopathological images using TensorFlow and Keras.
- Designed a project architecture involving a Flask backend and HTML, CSS, and JavaScript frontend.
- Project concept includes classification output and report generation; describe only implemented and tested features.

EDUCATION

B.Tech – Computer Science and Engineering **2023–2026**
Institute of Aeronautical Engineering (IARE) CGPA: 7.38/10

Diploma – Computer Science and Engineering **2020–2023**
St. Mary's Group of Institutions, Hyderabad CGPA: 6.68/10

SSC / Class X
MJBTBCWRIC Boys Convent School CGPA: 10/10

RESEARCH AND CONFERENCE PRESENTATION

Computationally Efficient AI Framework for Early-Stage Lung Cancer Classification Using Stain-Invariant Histopathological Features

Presented at the 14th International Conference on Contemporary Engineering and Technology (ICCET 2026), March 2026.

ADDITIONAL INFORMATION

Career Interests: Software Engineering, Java Development, Python Development, Web Development, AI/ML Engineering

Deployment Experience: Vercel and GitHub-based workflows
